## Professional Summary

Software Engineer with 5 years of experience building real-time streaming systems and cross-platform client architecture in C++ and C#. Designed low-latency WebRTC pipelines, codec negotiation, and platform abstraction layers powering enterprise products across 8+ platforms, from native Android (C++/JNI) to web.

## Education

**TED University** *Ankara, TR*
*BE in Computer Engineering* *Sep 2017 – May 2021*
*Minor in Business Administration*

- GPA: 3.48/4.0
- **Graduation Project:** WebRTC streaming with AR/VR application
- **Relevant Coursework:** Computer Architecture, Computer Vision, Machine Learning, Simulation

## Experience

**Software Engineer** *Munich, DE*
*Hololight* *Jun 2022 – Present*

- Led development of a unified C#/**Unity** client architecture for an enterprise real-time streaming product across 8 platforms (Meta Quest, PICO, HTC Vive Focus 3, HoloLens 2, Magic Leap 2, Windows, Android, Web).
- Designed the shared connection management layer for **WebRTC** streaming used by all platform clients.
- Lead developer on the **Hub Client**, an app launcher shipped to OEM partners – coordinated releases with partner engineering teams; built the app catalog, SSE-based updates, and multi-vendor release pipelines.
- Implemented native **C++**/JNI integrations for Android-based headsets, optimizing the frame-delivery path for low latency.
- Consolidated 6 platform-specific build variants into a single codebase through platform abstraction APIs.
- Engineered a browser client from scratch in **JavaScript** with WebSockets and **WebXR**, enabling zero-install streaming in desktop and headset browsers.
- Set up **CI/CD pipelines** with automated build and test stages for every platform target.
- Drove the team's adoption of **AI-assisted development** – evaluated and rolled out tooling, built LLM-powered pull request automation in **Python**, set up agent infrastructure, and wrote usage guidelines later adopted by other teams.

**Unity Developer** *Ankara, TR*
*Simovate* *Sep 2021 – Mar 2022*

- Developed AR/VR applications for industrial training and remote support in **Unity** (C#), with performance-critical modules written in **C++**.
- Built a **CNC milling machine simulator** in C++, demoed at Oracle's Industry Innovation Lab.
- Implemented a custom **mesh manipulation library** for real-time VR cutting and deformation simulations on standalone headsets.
- Created a mobile **Remote Maintenance Application** with live annotations and data streaming that let remote experts guide field technicians.

**Android Developer** *Ankara, TR*
*Medication Hour* *May 2020 – Sep 2020*

- Designed and launched **Medication Hour**, an Android app for managing medication schedules with customizable reminders on the Google Play Store.
- Implemented **Java** and **Firebase** backend handling real-time sync, authentication, and push notifications.
- Owned the full product lifecycle end-to-end – concept, UI design, development, deployment, and post-launch maintenance.

**Software Engineering Intern** *Ankara, TR*
*HAVELSAN* *Jul 2020 – Aug 2020*

- Worked on the **payroll module** of HAVELSAN's enterprise ERP system (**KOVAN**).
- Implemented calculation modules, query logic, and REST API endpoints in **Java/Spring Boot** to automate payroll processing.

**Game Development Intern** *Ankara, TR*
*Erik Games* *Jun 2019 – Jul 2019*

- Shipped **PlayStation 4** games using **Unreal Engine 4** and **Unity** – gameplay features and performance work.
- Contributed to published titles: EG Brain Retro Synthesis, Alpha Invasion, EG Brain Breaker.

## Skills

**Languages:** C++, C#, Python, Java, JavaScript, SQL

**Technologies:** WebRTC, WebSockets, WebXR, REST APIs, Unity, OpenXR, OpenGL, Unreal Engine

**Practices & Tools:** Git, CMake, CI/CD, Unit & Integration Testing, Code Review, JNI

**Platforms:** Android, Windows, Web, XR headsets (Meta Quest, PICO, HTC Vive Focus 3, HoloLens 2, Magic Leap 2)

**Specializations:** Real-Time Systems, Low-Latency Networking, Cross-Platform Architecture, Performance Optimization, AR/VR

## Projects

**Procedural Planets** – *GPU-Accelerated Planet Renderer* GitHub

- Procedural planet renderer in **C++17/OpenGL 4.3+** – compute shaders generate terrain in real time with icosahedron-based LOD.
- Atmospheric scattering, ocean rendering, biome classification, multi-layer noise (Simplex + Fractal).

## Certifications

**Machine Learning with Python: From Linear Models to Deep Learning** *Dec 2020*
*Massachusetts Institute of Technology (MIT)*

- Neural Networks, Reinforcement Learning, Linear/Nonlinear Classification, Collaborative Filtering. View Certificate
